

Group project

Build a **Cinema Booking Web Application**.

Split into 2 Scrum teams.

I will act as the Client. Team members will split the responsibilities of Developers, Designers, and QA.

Client Brief

My company owns a local cinema.

Customers currently book by phone.

We need a web application where customers can:

- View movies
- Choose showing time
- Select seats
- Confirm booking

The system must be delivered in 8 working days.

Sprint Planning Session

Each team:

- Reads requirements
- Estimates effort (S / M / L only)
- Breaks requirements into tasks
- Creates backlog
- Comes up with a sprint goal

Team organisation tools you can use:

- Sticky notes
- Trello
- GitHub Projects

Product Requirements

Core Requirement 1 — Movie Listing

As a customer,

I want to browse available movies,

So I can decide what to watch.

Acceptance Criteria

- Homepage displays available movies
- Each movie shows at least
 - title
 - rating
 - duration
 - genre
 - poster

Core Requirement 2 — View Showings

As a customer,

I want to see available dates and times for a given movie.

Acceptance Criteria

- Selecting a movie opens details page
- Display showings schedule

Core Requirement 3 — Seat Booking

As a customer,

After I select a movie and a date and time of showing,

I want to choose my seats.

Acceptance Criteria

- Display a map of all seats
- Ability to select more than one seat at a time

Constraints

- Maximum 6 seats can be selected
- Cannot select unavailable seats

Core Requirement 4 — Checkout

As a customer,

I want to confirm booking.

Acceptance Criteria

- Booking form must include:
 - Name
 - Email
 - Selected tickets
- After submission:

- Show confirmation page
- Generate fake booking reference (Example: CIN-2847)

No persistence required - saving the booking is optional.

Core Requirement 5 — Booking Summary

As a customer,

I want to review my booking.

Acceptance Criteria

- Display:
 - Customer name
 - Movie
 - Time
 - Seats
 - Total tickets
 - Confirmation code
